

INT./EXT. PLACE AT WHICH CONTRACT IS MADE - (PRESENT) DAY

The scene is filled to the brim with functions, and JSON objects. No states at sight, though, as they have been not invited in, because the developer did not invite them. He has had a rocky relationship with them ever since he grew into the functional way of programming.

DEVELOPER

Do you accept to determine a place at which new functionalities would be presented?

CORE PROJECT

I do.

DEVELOPER

Do you accept to expose two and only two functions to the world, functions that would allow the world to know if they should use your transformations, and functions that would perform such transformations on the very data you were given to decide if your help was going to be needed for such a task?

PLUGIN

I don't think I follow, ...I

DEVELOPER

Yes, I know of you. You don't know much else about anything except doing your task and doing it correctly.

PLUGIN

To do one thing and do it well, yes.

DEVELOPER

Well. Do you accept to perform such a task on one function, and on another function just like the first one, receive the same input but return not the same output? To return a Boolean instead of the transformed data?

PLUGIN

I do.

DEVELOPER

From this day on, I will no longer stand in the way of you two. From now on you two will know the ways onto the other, so that no longer will I have to write your interactions.
